

WHY

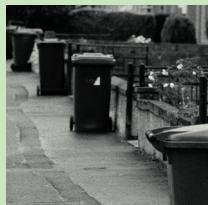

Garden Waste Journey

Put garden waste into your BROWN bin (it can also be taken to Marchbanks, Riverside and Baldovie Recycling Centres).

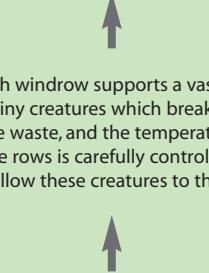

Please put your brown bin on the kerbside by 7.30am on your scheduled collection day.

About 9 months later, YOUR garden waste has turned into Discovery Compost, which is a high quality alternative to peat-based products.

This is available to purchase at Riverside. Compost can be used as a soil conditioner or topsoil substitute in your garden.

Each windrow supports a vast array of tiny creatures which break down the waste, and the temperature in the rows is carefully controlled to allow these creatures to thrive.

Your garden waste is taken to the Riverside Composting Facility where the composting process starts. The garden waste is shredded, riddled and then windrowed.
