

**1 CAMPERDOWN PARK - CONSTRUCTION OF CONCRETE WASH BAY/RECYCLING SYSTEM (AN282-2007)**

It is proposed that the current wash bay provision at Camperdown Park which is used for the plant and equipment including the grass cutting machinery is upgraded to be more environmentally friendly by the incorporation of a closed loop recycle system within a new wash bay facility.

The benefits of the system will include a more environmentally friendly approach by the management of waste water from the machinery and the elimination of any risks from contaminants.

A quotation has been received from a specialist supplier and contractor ESD Waste2Water Europe Ltd, Baralston, Staffordshire for £24,245. This includes for the supply and construction of the concrete pad together with the closed loop recycling system including pumps and settlement tanks etc. It is recommended that the quotation from the specialist supplier is agreed. Provision has been made for the works within the Leisure and Communities Department's 2007/08 Capital Budget.
