

REPORT TO: PERFORMANCE & AUDIT COMMITTEE –24 SEPTEMBER 2025

REPORT ON: DUNDEE HEALTH AND SOCIAL CARE PARTNERSHIP PERFORMANCE REPORT – 2024-25 QUARTER 4

REPORT BY: CHIEF FINANCE OFFICER

REPORT NO: PAC23-2025

1.0 PURPOSE OF REPORT

1.1 The purpose of this report is to update the Performance and Audit Committee on 2024-25 Quarter 4 performance against the National Health and Wellbeing Indicators and 'Measuring Performance Under Integration' indicators. Data is also provided in relation to Social Care – Demand for Care at Home services.

2.0 RECOMMENDATIONS

It is recommended that the Performance & Audit Committee (PAC):

- 2.1 Note the content of this summary report.
- 2.2 Note the performance of Dundee Health and Social Care Partnership, at both Dundee and Local Community Planning Partnership (LCPP) levels, against the National Health and Wellbeing Indicators as summarised in Appendix 1 (tables 1, 2 and 3).
- 2.3 Note the performance of Dundee Health and Social Care Partnership against the 'Measuring Performance Under Integration' indicators as summarised in Appendix 1 (table 3).
- 2.4 Note the number of people waiting for a social care assessment and care at home package and associated hours of care yet to be provided in Appendix 2.

3.0 FINANCIAL IMPLICATIONS

3.1 None.

4.0 BACKGROUND INFORMATION

4.1 The Quarterly Performance Report analyses performance against the National Health and Wellbeing Indicators. 5 of the 23 National Health and Wellbeing Indicators are monitored quarterly (emergency admissions, emergency bed days, readmissions, falls admissions and delayed discharge bed days lost). The quarterly performance report also summarises performance against indicators in the Measuring Performance Under Integration (MPUI) suite of indicators for four out of six high level service delivery areas – emergency admissions, emergency bed days, accident and emergency and delayed discharges, end of life and balance of care. Further information regarding these indicators and the methodology used to report these indicators can be found in Appendix 3.

4.2 The Public Bodies (Joint Working) (Scotland) Act 2014 and associated regulations and guidance prescribes that Partnerships must compare performance information between the current reporting year and the preceding five reporting years. For Q4 2024-25, quarterly performance reports performance is measured against the 2019-20 baseline year and because 2019-20 performance was affected by the Covid-19 Pandemic, 2018-19 data has also been provided for all indicators as a supplementary baseline.

5.0 QUARTER 4 PERFORMANCE 2024-25 – KEY ANALYTICAL MESSAGES

5.1 Key analytical messages for the Quarter 4 2024-25 period are:

- Significant variation by Local Community Planning Partnership (LCPP) is still apparent, with poorest performance for many of the National Indicators in the most deprived LCPPs.
- Performance is poorer against the 2019-20 baseline and the 2018-19 baseline for rate of emergency admissions 18+, 28-day readmissions rate 18+, emergency admissions as a rate of all A+E attendances 18+ and rate of hospital admissions due to a fall 65+.
- Performance has improved for emergency bed days rate per 100,000 18+ and standard delayed discharge bed days lost rate per 1,000 75+ compared with both the 2019-20 and 2018-19 baselines.
- Delayed discharge (code 9) bed day lost rate per 1,000 shows a deterioration against the 2019-20 baseline but an improvement against the 2018-19 baseline.
- The rate of emergency admissions per 100,000 population aged 18 and over increased by 12% compared to the 2019-20 baseline and increased by 10.3% compared to the 2018-19 baseline. This represents a deterioration in performance, with increases observed across all Local Community Partnerships (LCPP). The largest increase was in The Ferry with an increase of 29.7% compared to 2019-20 and an increase of 24.6% compared to 2018-19.
- There was an improvement in performance compared with the 2019-20 baseline for the emergency bed day rate per 100,000 population aged 18 and over, with a decrease of 6.3% compared to 2019-20 baseline and 10.9% decrease when compared to 2018-19. This is a positive trend which reflects local improvements in community care that support earlier discharge. Four LCPPs (West End, Strathmartine, Maryfield, Coldside and Lochee) had a lower rate of emergency bed days in Q4 than both 2018-19 and 2019-20 baseline years. In East End, the rate of emergency bed days was lower in Q4 than the 2018-19 baseline (indicating improvement), but higher in Q4 than the 2019-20 baseline (indicating deterioration). Dundee ranked 10th in Scotland for this indicator and was the top performer in the family group.
- At Q4 2024-25 the rate of emergency readmissions within 28 days of any admission was 1% higher than both 2019-20 and 2018-19 baselines, indicating a small deterioration. However, East End and Lochee showed improvement, with lower readmission rates compared to both baseline years. Five LCPPs, Lochee, East End, North East, Strathmartine and Maryfield, showed an improvement against the 2018-19 baseline only.
- At Q4 2024-25 the rate of hospital admissions due to a fall was 5% higher than both the 2018-19 and 2019-20 baselines, indicating a deterioration in performance. Coldside and West End were the only two LCPPs to show an improvement compared to both baseline years. Lochee and North East also showed improvement but only compared with the 2019-20 baseline.
- At Q4 2024-25, the rate of bed days lost to standard delayed discharge for people aged 75 and over was 63% lower than the 2019-20 baseline and 51% lower than the 2018-19 baseline, indicating a significant improvement. All eight LCPP showed an improvement. In Q4, the LCPP with the highest rate was West End with 197 bed days lost per 1,000

people aged 75 and over. The lowest rate was in North East with 75 bed days lost per 1,000 people aged 75 and over.

- At Q4 2024-25, the rate of bed days lost to complex (code 9) delayed discharges for people aged 75 and over was 42% higher than the 2019-20 baseline (deterioration) and 3% lower than the 2018-19 baseline (an improvement). Compared to the 2019-20 baseline year, Lochee, North East, Maryfield and West End showed improvement. Against the 2018-19 baseline, Lochee, North East and Stathmartine showed improvement. In Q4 2024-25, Coldside had the highest bed days lost (code 9) per 1,000 population aged 75 and over while Maryfield had the lowest.
- Updated figures for proportion of last 6 months of life spent at home or community settings, show an improvement, with 90.9% of time spent in these settings. Dundee ranked 7th in Scotland and was the top performer within the family group.
- There has been an increase in the proportion of people with intensive care needs receiving care at home, rising from 58.7% in 2018 to 65.9% in 2024. This is slightly higher than the Scottish average. Dundee ranked 12th in Scotland and was the top performer in Tayside.
- There has been an improvement in proportion of care services graded 'good' or 'better' in the Care Inspectorate Inspections. Following a drop to 74% during the pandemic, this figure has now risen to 82.6% which is slightly higher than the Scottish average.

5.2 Public Health Scotland publishes a report on the number of people who are waiting for a Social Care and Care at Home service provided by the Health and Social Care Partnerships. The information, contained in Appendix 2, shows the number of people waiting for an assessment for a package of care to allow them to live at home or in the community and the number of hours of care that has been assessed but not yet delivered. The information is presented by people waiting in hospital or waiting at home / in the community for the care at home service to be delivered.

Data published from 15 January 2024 onwards reflects improved definitions and therefore caution should be taken when comparing with figures prior to this date.

The number of people waiting for packages of care is showing a slight upward trend, following a period of low numbers.

In Dundee, as of 30 June 2025:

- 0 people waited in hospital and 124 people waited in the community for a social care assessment. 0 people have waited in hospital each week since 17 October 2022.
- 14 people were assessed and waiting for a care at home package in hospital (168 hours yet to be provided).
- 13 people were assessed and waiting for a care at home package in the community (42 hours yet to be provided).
- For those already in receipt of a care at home package 153 additional hours were required and not provided.

6.0 POLICY IMPLICATIONS

6.1 This report has been subject to the Pre-IIA Screening Tool and does not make any recommendations for change to strategy, policy, procedures, services or funding and so has not been subject to an Integrated Impact Assessment. An appropriate senior manager has reviewed and agreed with this assessment.

7.0 RISK ASSESSMENT

Risk 1 Description	Poor performance against national indicators could affect outcomes for individuals and their carers, spend associated with poor performance and the ability of the IJB to deliver fully commitments set out in the Strategic and Commissioning Plan.
Risk Category	Financial, Governance, Political
Inherent Risk Level	Likelihood 3 x Impact 5 = Risk Scoring 15 (which is an Extreme Risk Level)
Mitigating Actions (including timescales and resources)	<ul style="list-style-type: none"> - Continue to develop a reporting framework which identifies performance against national and local indicators. - Continue to report data quarterly to the PAC to highlight areas of exceptional performance (poor and excellent). - Continue to support operational managers by providing in-depth analysis regarding areas of poor performance, such as around readmissions to hospital and falls related hospital admissions. - Continue to ensure that data informs operational practices and improvements and also that operational activities and priorities are used to interpret trends shown by the data. - Work with operational managers to identify areas of poor performance that result in operational risk and undertake additional analysis as required.
Residual Risk Level	Likelihood 3 x Impact 3 = Risk Scoring 9 (which is a Moderate Level)
Planned Risk Level	Likelihood 2 x Impact 3 = Risk Scoring 6 (which is a Moderate Risk Level)
Approval recommendation	Given the moderate level of planned risk, this risk is deemed to be manageable.

8.0 CONSULTATIONS

8.1 The Chief Officer, Heads of Service, Health and Community Care and the Clerk were consulted in the preparation of this report.

9.0 BACKGROUND PAPERS

There was an increase in the emergency admissions rate by 10.3% in Q4 2024-25 compared with the 2018-19 baseline. This equates to an increase of 1,603 emergency admissions (deterioration).

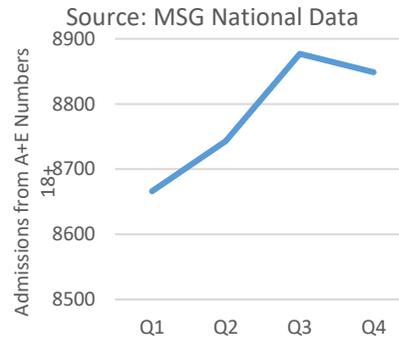

Increase during post pandemic recovery period.

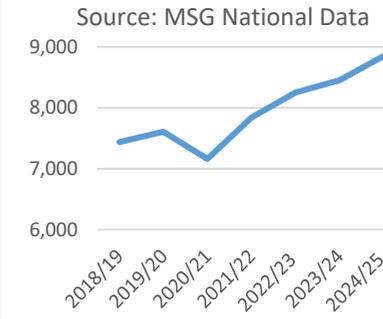

Emergency Admissions Numbers from A&E (MSG)

1,2744 more emergency admissions from A+E in Q4 24/25 compared with the 2019/20 baseline.

1,409 more emergency admissions from A+E in Q4 24/25 compared with the 18/19 baseline.

Peak at Q3 but a reduction in Q4.

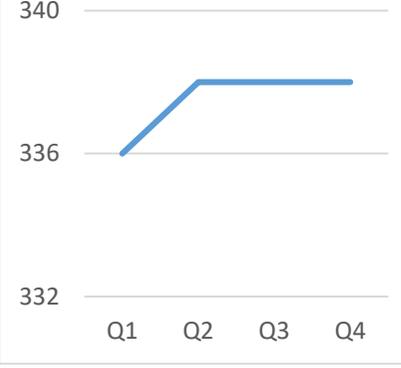

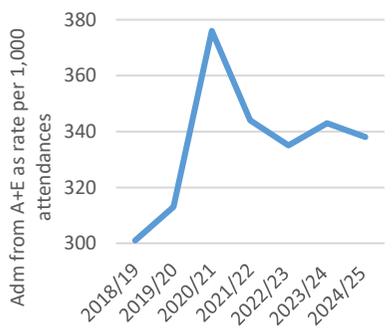

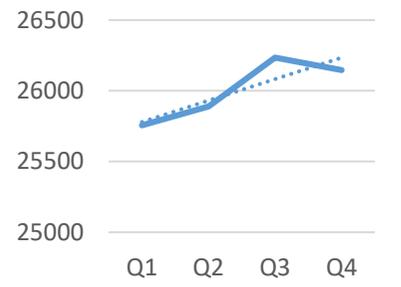

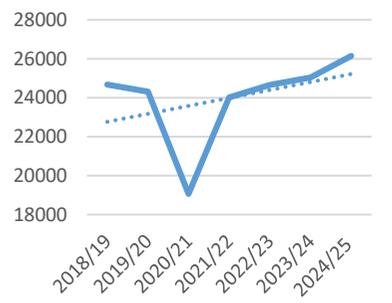

Increase during post pandemic recovery period which continued to Q4 2024/25.

ITEM No ...6.....

APPENDIX 2 SUMMARY OF SOCIAL CARE – DEMAND FOR CARE AT HOME SERVICES DUNDEE

This report is an assessment of the demand for Care at Home services provided by Health and Social Care Partnerships. The information shows the number of people waiting for an assessment for a package of care to allow them to live at home or in the community and the number of hours of care that has been assessed but not yet delivered. The information is presented by people waiting in hospital or waiting at home/community for the care at home services to be delivered.

The data items submitted from 15 January 2024 onwards reflects improved definitions and therefore comparing figures before this date should be done with caution.

Chart 1

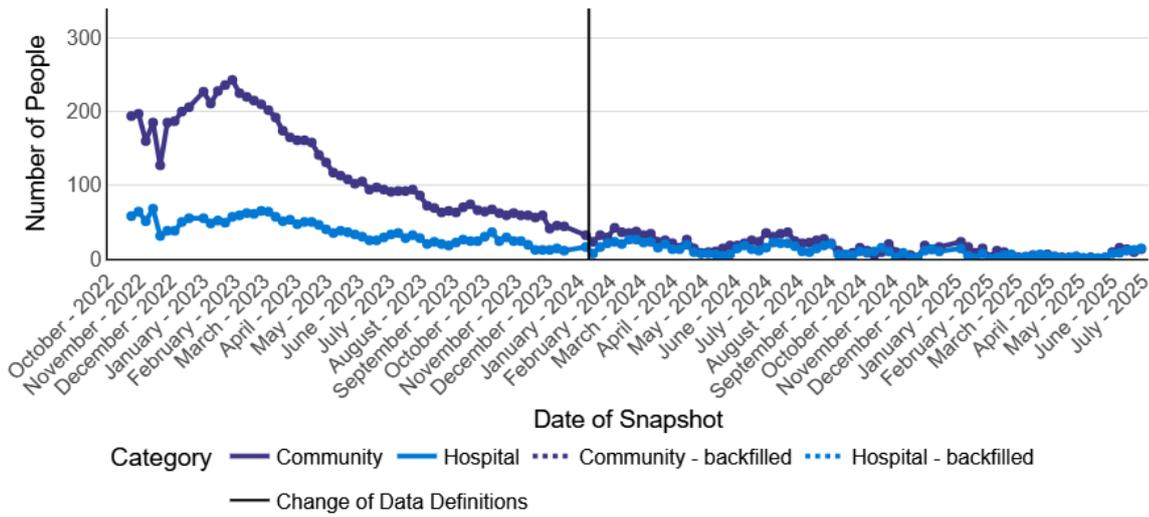

In Dundee as at 30 June 2025:

- 0 people waited in hospital and 124 people waited in the community for a social care assessment.
- 0 people have waited in hospital each week since 17 October 2022.

Chart 2

Number of People Assessed and waiting for a Care at Home Package in Dundee City^P.

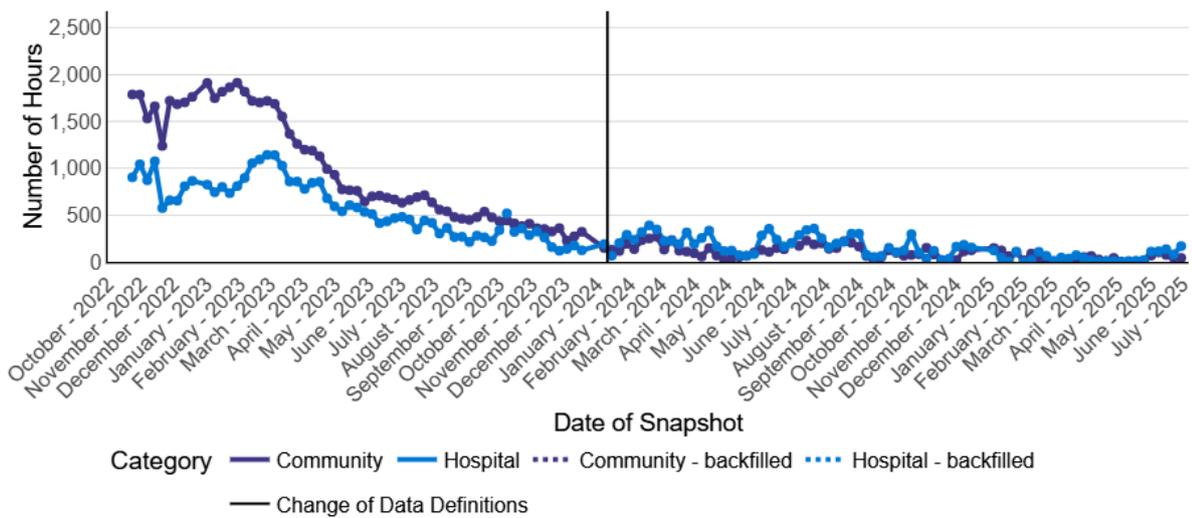

In Dundee as at 30 June 2025:

- 14 people was assessed and were waiting in hospital for a care at home package.
- 13 people were assessed and were waiting in the community for a care at home package.

Chart 3

Number of Hours of Care at Home yet to be provided for Assessed Individuals in Dundee City^P.

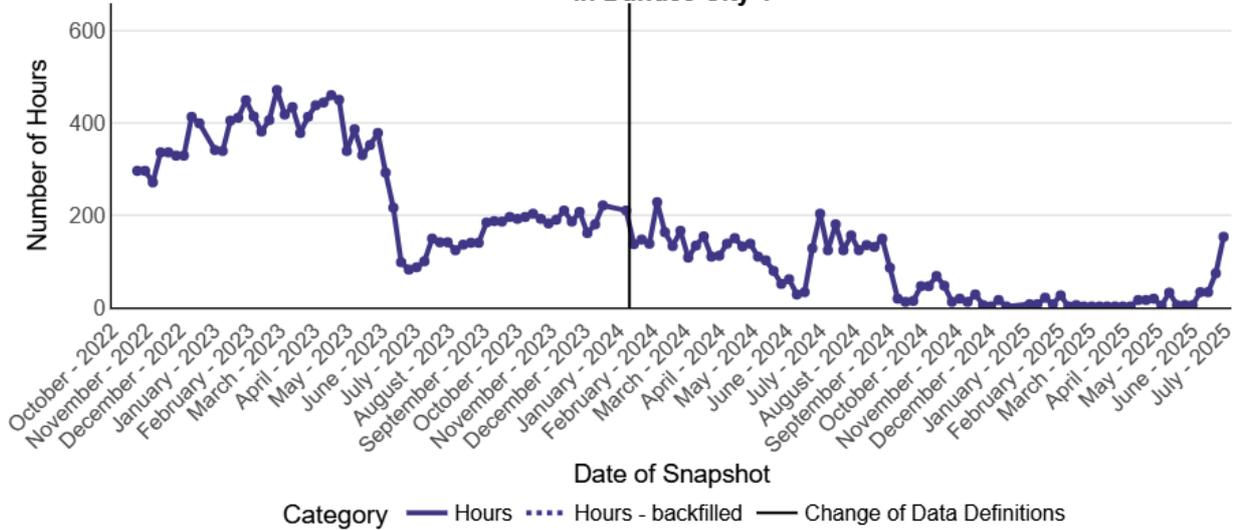

In Dundee as at 30 June 2025:

- 14 people were assessed and waiting for a care at home package in hospital (168 hours yet to be provided).
- 13 people were assessed and waiting for a care at home package in the community (42 hours yet to be provided).

Chart 4

Number of additional Hours of Care Assessed as Needed and not provided for those already in Receipt of a Care at Home Package in Dundee City^P.

In Dundee as at 30 June 2025:

- For those already in receipt of a care at home package 153 additional hours were required and not provided.

APPENDIX 3 – DATA SOURCES USED FOR MEASURING PERFORMANCE

The Quarterly Performance Report analyses performance against National Health and Wellbeing Indicators 1-23 and Measuring Performance Under Integration (MPUI) indicators. 5 of the 23 National Health and Wellbeing Indicators are monitored quarterly (emergency admissions, emergency bed days, readmissions, falls admissions and delayed discharge bed days lost. Data is provided both at Dundee and Local Community Planning Partnership (LCPP) level (where available). Data is currently not available for eight out of the 13 National Indicators which are not reported using The Health and Social Care Experience Survey (see section 4.3). The Scottish Government and Public Health Scotland are working on the development of definitions and datasets to calculate these indicators nationally.

The National Health and Wellbeing Indicators 1-9 are reported from The Health and Social Care Experience Survey administered by the Scottish Government which is conducted biennially. Full details were provided to the PAC in February 2021 (Article V of the minute of the Dundee Performance and Audit Committee held on 3 February 2021 refers). The Scottish Government changed the methodology used to filter responses to reflect people who receive services from the Partnership and therefore it is not possible to longitudinally compare results for National Indicators 1-7 and 9.

The quarterly performance report also summarises performance against indicators in the Measuring Performance Under Integration (MPUI) suite of indicators for four out of six high level service delivery areas – emergency admissions, emergency bed days, accident and emergency and delayed discharges, end of life and balance of care. In November 2020 the Performance and Audit Committee agreed that targets should not be set for 2020/21 for these indicators, however that the indicators should continue to be monitored in quarterly performance reports submitted to the PAC (Article VI of the minute of the Dundee Performance and Audit Committee held on 24 November 2020 refers).

National data is provided to all partnerships, by Public Health Scotland. This data shows rolling¹ monthly performance for emergency admissions, emergency admissions from accident and emergency, accident and emergency attendances, emergency bed days and delayed discharges. Previously Public Health Scotland were only able to provide data for all ages, however following feedback from Dundee and other Partnerships they have now provided data for people age 18+.

It was agreed at the PAC held on 19 July 2017 (Article VIII of the minute of the meeting refers) that local data, provided by the NHS Tayside Business Unit will be used to produce more timeous quarterly performance reports against the National Health and Wellbeing Indicators. NHS Tayside Business Unit has provided data for emergency admissions, emergency bed days, readmissions, delayed discharges and falls.

Data provided by NHS Tayside differs from data provided by Public Health Scotland (PHS); the main differences being that NHS Tayside uses 'board of treatment' and PHS uses 'board of residence' and NHS Tayside uses an admissions based dataset whereas PHS uses a discharge based dataset (NHS Tayside records are more complete but less accurate as PHS data goes through a validation process). As PHS data is discharge based, numbers for one quarter will have been updated the following quarter as records get submitted for those admitted one quarter and discharged a subsequent quarter. By the time PHS release their data, records are (in most cases) 99% complete. The data provided by NHS Tayside Business Unit is provisional and figures should be treated with caution.

¹ For Q4 the data is for the period 1 April 2024 – 31 March 2025.
