

REPORT TO: PERFORMANCE & AUDIT COMMITTEE –29 JANUARY 2025

REPORT ON: DUNDEE HEALTH AND SOCIAL CARE PARTNERSHIP PERFORMANCE REPORT – 2024-25 QUARTER 2

REPORT BY: CHIEF FINANCE OFFICER

REPORT NO: PAC4-2025

1.0 PURPOSE OF REPORT

- 1.1 The purpose of this report is to update the Performance and Audit Committee on 2024-25 Quarter 2 performance against the National Health and Wellbeing Indicators and 'Measuring Performance Under Integration' indicators. Data is also provided in relation to Social Care – Demand for Care at Home services.

2.0 RECOMMENDATIONS

It is recommended that the Performance & Audit Committee (PAC):

- 2.1 Note the content of this summary report.
- 2.2 Note the performance of Dundee Health and Social Care Partnership, at both Dundee and Local Community Planning Partnership (LCPP) levels, against the National Health and Wellbeing Indicators as summarised in Appendix 1 (tables 1, 2 and 3).
- 2.3 Note the performance of Dundee Health and Social Care Partnership against the 'Measuring Performance Under Integration' indicators as summarised in Appendix 1 (table 3).
- 2.4 Note the number of people waiting for a social care assessment and care at home package and associated hours of care yet to be provided in Appendix 2.

3.0 FINANCIAL IMPLICATIONS

- 3.1 None.

4.0 BACKGROUND INFORMATION

- 4.1 The Quarterly Performance Report analyses performance against the National Health and Wellbeing Indicators. 5 of the 23 National Health and Wellbeing Indicators are monitored quarterly (emergency admissions, emergency bed days, readmissions, falls admissions and delayed discharge bed days lost). The quarterly performance report also summarises performance against indicators in the Measuring Performance Under Integration (MPUI) suite of indicators for four out of six high level service delivery areas – emergency admissions, emergency bed days, accident and emergency and delayed discharges, end of life and balance of care. Further information regarding these indicators and the methodology used to report these indicators can be found in Appendix 3.

- 4.2 The Public Bodies (Joint Working) (Scotland) Act 2014 and associated regulations and guidance prescribes that Partnerships must compare performance information between the current reporting year and the preceding five reporting years. For Q2 2024-25, quarterly performance reports performance is measured against the 2019-20 baseline year and because 2019-20 performance was affected by the Covid-19 Pandemic, 2018-19 data has also been provided for all indicators as a supplementary baseline.

5.0 QUARTER 2 PERFORMANCE 2024-25 – KEY ANALYTICAL MESSAGES

- 5.1 Key analytical messages for the Quarter 2 2024-25 period are:

- Significant variation by Local Community Planning Partnership (LCPP) is still apparent, with poorest performance for many of the National Indicators in the most deprived LCPPs.
- Performance is poorer than the 2019-20 baseline and poorer than the 2018-19 baseline for rate of emergency admissions 18+, 28 day readmissions rate 18+, emergency admissions as a rate of all A+E attendances 18+ and rate of hospital admissions due to a fall 65+.
- There was a slightly deterioration in performance compared with the 2019-20 baseline (increase of 0.6%) for the emergency bed day rate 18+, however there was an improvement when compared to the 2018-19 baseline (decrease by 4.4%). This is a positive trend which reflects local improvements in community care to support earlier discharge. 4 LCPPs (West End, Maryfield, Coldside and Lochee) saw a decrease in the rate of emergency bed days against both baseline years.
- The rate of emergency admissions per 100,000 18+ population increased by 17.2% compared with the 2019-20 baseline and increased by 15.5% compared with the 2018-19 baseline and there was an increase across every LCPP. This is a deterioration in performance. The greatest increase compared with both the 2018-19 and 2019-20 baselines was in The Ferry.
- The rate of emergency readmissions within 28 days of any admission increased by 6% between both the 2019-20 and 2018-19 baselines and Q2 2024-25. There was a decrease in East End between both the 2018-19 and the 2019-20 baselines. There was a decrease in the West End between the 2019-20 baseline and Q2 2024-25.
- The rate of hospital admissions due to a fall increased between both the 2018-19 and 2019-20 baselines and Q2 2024-25. Coldside was the only LCPP to show an improvement at Q2 2024-25 compared with the 2019-20 baseline (decrease in the rate by 12%) and Coldside and West End were the only two LCPPs to show an improvement at Q2 2024-25 compared with the 2018-19 baseline (decrease in the rates by 15% and 14% respectively).
- Rate of bed days lost to standard delayed discharge for people aged 75+ is 43% less than the 2019-20 baseline and improved in all LCPP except one, or 23% less than the 2018-19 baseline and improved in 5 LCPPs. At Q2 the LCPP with the highest rate was Mayfield (332 bed days lost per 1,000 people aged 75+) followed by West End and the LCPP with the lowest rate was North East (88 bed days lost per 1,000 people aged 75+).
- Rate of bed days lost to complex (code 9) delayed discharge for people aged 75+ decreased by 30% between the 2019-20 baseline or by 52% against 2018-19 baseline and Q2 2024-25, which is an improvement. There were increases in 5 out of the 8 LCPPs against both baseline years. Lochee had the highest rate, 90 per 1,000 75+(code 9 delays) and Maryfield with the lowest rate, 0 per 1,000 75+.

- 5.2 Public Health Scotland publishes a report on the number of people who are waiting for a Social Care and Care at Home service provided by the Health and Social Care Partnerships. The information, contained in Appendix 2, shows the number of people waiting for an assessment for a package of care to allow them to live at home or in the community and the number of hours of

care that has been assessed but not yet delivered. The information is presented by people waiting in hospital or waiting at home / in the community for the care at home service to be delivered.

Data published from 15 January 2024 onwards reflects improved definitions and therefore caution should be taken when comparing with figures prior to this date.

In Dundee, as at 02 December 2024:

- 0 people waited in hospital and 118 people waited in the community for a social care assessment. 0 people have waited in hospital each week since 17 October 2022.
- 11 people were assessed and waiting for a care at home package in hospital (163 hours yet to be provided).
- 18 people were assessed and waiting for a care at home package in the community (20 hours yet to be provided).
- For those already in receipt of a care at home package 2 additional hours were required and not provided.

6.0 POLICY IMPLICATIONS

- 6.1 This report has been subject to the Pre-IIA Screening Tool and does not make any recommendations for change to strategy, policy, procedures, services or funding and so has not been subject to an Integrated Impact Assessment. An appropriate senior manager has reviewed and agreed with this assessment.

7.0 RISK ASSESSMENT

Risk 1 Description	Poor performance against national indicators could affect outcomes for individuals and their carers, spend associated with poor performance and the ability of the IJB to deliver fully commitments set out in the Strategic and Commissioning Plan.
Risk Category	Financial, Governance, Political
Inherent Risk Level	Likelihood 3 x Impact 5 = Risk Scoring 15 (which is an Extreme Risk Level)
Mitigating Actions (including timescales and resources)	<ul style="list-style-type: none">- Continue to develop a reporting framework which identifies performance against national and local indicators.- Continue to report data quarterly to the PAC to highlight areas of exceptional performance (poor and excellent).- Continue to support operational managers by providing in-depth analysis regarding areas of poor performance, such as around readmissions to hospital and falls related hospital admissions.- Continue to ensure that data informs operational practices and improvements and also that operational activities and priorities are used to interpret trends shown by the data.- Work with operational managers to identify areas of poor performance that result in operational risk and undertake additional analysis as required.
Residual Risk Level	Likelihood 3 x Impact 3 = Risk Scoring 9 (which is a Moderate Level)
Planned Risk Level	Likelihood 2 x Impact 3 = Risk Scoring 6 (which is a Moderate Risk Level)
Approval recommendation	Given the moderate level of planned risk, this risk is deemed to be manageable.

8.0 CONSULTATIONS

8.1 The Chief Officer, Heads of Service, Health and Community Care and the Clerk were consulted in the preparation of this report.

9.0 BACKGROUND PAPERS

9.1 None.

APPENDIX 2 SUMMARY OF SOCIAL CARE – DEMAND FOR CARE AT HOME SERVICES DUNDEE

This report is an assessment of the demand for Care at Home services provided by Health and Social Care Partnerships. The information shows the number of people waiting for an assessment for a package of care to allow them to live at home or in the community and the number of hours of care that has been assessed but not yet delivered. The information is presented by people waiting in hospital or waiting at home/community for the care at home services to be delivered.

The data items submitted from 15 January 2024 onwards reflects improved definitions and therefore comparing figures before this date should be done with caution.

Chart 1

In Dundee as at 02 December 2024:

- 0 people waited in hospital and 118 people waited in the community for a social care assessment.
- 0 people have waited in hospital each week since 17 October 2022.

Chart 2

In Dundee as at 02 December 2024:

- 11 people were assessed and were waiting in hospital for a care at home package.
- 18 people were assessed and were waiting in the community for a care at home package.

Chart 3

In Dundee as at 02 December 2024:

- 11 people were assessed and waiting for a care at home package in hospital (163 hours yet to be provided).
- 18 people were assessed and waiting for a care at home package in the community (20 hours yet to be provided).

Chart 4

In Dundee as at 02 December 2024:

- For those already in receipt of a care at home package 2 additional hours were required and not provided.

APPENDIX 3 – DATA SOURCES USED FOR MEASURING PERFORMANCE

The Quarterly Performance Report analyses performance against National Health and Wellbeing Indicators 1-23 and Measuring Performance Under Integration (MPUI) indicators. 5 of the 23 National Health and Wellbeing Indicators are monitored quarterly (emergency admissions, emergency bed days, readmissions, falls admissions and delayed discharge bed days lost. Data is provided both at Dundee and Local Community Planning Partnership (LCPP) level (where available). Data is currently not available for eight out of the 13 National Indicators which are not reported using The Health and Social Care Experience Survey (see section 4.3). The Scottish Government and Public Health Scotland are working on the development of definitions and datasets to calculate these indicators nationally.

The National Health and Wellbeing Indicators 1-9 are reported from The Health and Social Care Experience Survey administered by the Scottish Government which is conducted biennially. Full details were provided to the PAC in February 2021 (Article V of the minute of the Dundee Performance and Audit Committee held on 3 February 2021 refers). The Scottish Government changed the methodology used to filter responses to reflect people who receive services from the Partnership and therefore it is not possible to longitudinally compare results for National Indicators 1-7 and 9.

The quarterly performance report also summarises performance against indicators in the Measuring Performance Under Integration (MPUI) suite of indicators for four out of six high level service delivery areas – emergency admissions, emergency bed days, accident and emergency and delayed discharges, end of life and balance of care. In November 2020 the Performance and Audit Committee agreed that targets should not be set for 2020/21 for these indicators, however that the indicators should continue to be monitored in quarterly performance reports submitted to the PAC (Article VI of the minute of the Dundee Performance and Audit Committee held on 24 November 2020 refers).

National data is provided to all partnerships, by Public Health Scotland. This data shows rolling¹ monthly performance for emergency admissions, emergency admissions from accident and emergency, accident and emergency attendances, emergency bed days and delayed discharges. Previously Public Health Scotland were only able to provide data for all ages, however following feedback from Dundee and other Partnerships they have now provided data for people age 18+.

It was agreed at the PAC held on 19 July 2017 (Article VIII of the minute of the meeting refers) that local data, provided by the NHS Tayside Business Unit will be used to produce more timeous quarterly performance reports against the National Health and Wellbeing Indicators. NHS Tayside Business Unit has provided data for emergency admissions, emergency bed days, readmissions, delayed discharges and falls.

Data provided by NHS Tayside differs from data provided by Public Health Scotland (PHS); the main differences being that NHS Tayside uses 'board of treatment' and PHS uses 'board of residence' and NHS Tayside uses an admissions based dataset whereas PHS uses a discharge based dataset (NHS Tayside records are more complete but less accurate as PHS data goes through a validation process). As PHS data is discharge based, numbers for one quarter will have been updated the following quarter as records get submitted for those admitted one quarter and discharged a subsequent quarter. By the time PHS release their data, records are (in most cases) 99% complete. The data provided by NHS Tayside Business Unit is provisional and figures should be treated with caution.

¹ For Q2 the data is for the period October 2023 to September 2024
